

UL FUSStart Services

After you've invested in designing your product, having it evaluated by UL and getting your production line up to speed, the last thing you need to hear is that your manufacturing facility doesn't meet UL's Follow-Up Services (FUS) requirements. That's where the UL FUSStart service can give you confidence that you're ready to go into production — with no delays.

UL's Follow-Up Services help maintain the integrity of the UL Mark

A key element of maintaining the integrity of UL certification is UL's ongoing Factory Follow-Up Services program. Once your initial product testing has been successfully completed, UL will continue to visit your manufacturing locations to determine if your product continues to meet appropriate requirements. These visits continue over the lifetime of your UL product certification, as long as you wish to continue to use a UL Mark on your product.

UL follow-up visits are unannounced and occur periodically, depending on the type of product. From time to time, UL field representatives may select product samples from the factory, the open market or elsewhere to further evaluate compliance.

Building a solid foundation

UL FUSStart aims to smooth implementation of your Follow-Up Services program by providing you with an important training tool before your product evaluation has been completed and your Initial Production Inspection takes place.

With UL FUSStart, you get:

No surprises – The training tool explains Follow-Up Services procedures and practices, sharing essential knowledge to prepare you for your actual FUS inspections.

UL's FUSStart eliminates surprises and gives you confidence that your manufacturing facility is ready to produce UL certified products.

Planning in advance – You can more effectively plan production by understanding UL policies and requirements in advance. Knowing the traceability requirements and incorporating them into your manufacturing facility's quality process can help speed up the on-site FUS inspection process and give you confidence that your factory is ready to produce UL-compliant products.

Help in meeting your go-to-market schedules – FUSStart will help you to avoid delays in production by giving you the knowledge you need to effectively use the UL Certification mark and meet the requirements of UL's follow-up service.

Cost control – Manufacturing facilities unable to produce UL-compliant products are subject to additional on-site follow-up visits, driving up your compliance costs and delaying your product in leaving the manufacturing facility with a UL Mark. With UL FUSStart, you build a solid foundation for your manufacturing process to be in compliance with UL requirements.
